Before/after debugging log

Record your fix. Write the step before your change, the step after your change, and one line saying why the change improved the outcome.

Step number	Before (old step)	After (new step)	Why it is better

Exit ticket

Name the faulty step you found, the change you made, and why the change improved the outcome.

Challenge (stretch)

Rewrite the whole path to reach the GOAL in the fewest steps you can. Then write your own faulty sequence and give it to a partner to debug - see if they can find your hidden broken step and explain the fix.
